EDUCATION

UCL

MSc Software Systems Engineering

September 2025 - Current

London, England

- **Predicted - Distinction (GPA 4)**

- **Relevant Modules:** Requirements Engineering, Validation & Verification, Software Development Practices, Responsible Software Engineering & Cybersecurity.

University of Westminster

Bachelor of Science, Computer Science

July 2025

London, England

- **First Class Honours (GPA 4)**

- **Relevant Modules:** Algorithms & Data Structure, Applied AI, Object-Oriented Programming (Java), Cybersecurity, Database Systems and Client-Server Architectures.

PROJECTS

[DuelDiskScan.gg](#)

[GitHub Repo](#)

- **Microservices Backend:** Architected a scalable backend using Java 21 and Spring Boot, decoupling core logic from resource-intensive tasks to ensure high availability.
- **OCR Integration:** Engineered a custom OCR microservice using Python and EasyOCR; integrated it with the Java backend to automate physical card recognition, reducing manual entry time by **~90%**.
- **Frontend & Auth:** Developed a modern SPA using React 19, implementing secure JWT authentication flows and server-side caching for optimized data fetching.
- **Database Design:** Designed a normalized PostgreSQL schema to manage complex many-to-many relationships, ensuring sub-100ms query performance.
- **Tech Stack:** React 19, Java (Spring Boot), PostgreSQL, Python, CSS Modules, JWT.

[Masteries League of Legends](#)

[GitHub Repo](#)

- **Reactive Systems:** Engineered a reactive backend service using Java 21 and Spring WebFlux, utilizing non-blocking I/O to handle concurrent requests efficiently.
- **Performance Optimization:** Optimized frontend rendering via Lazy Loading and Virtual Scrolling in React, maintaining 60fps for high-asset grids.
- **Caching Strategy:** Implemented server-side caching with Spring's **@Cacheable**, reducing redundant API calls to Riot Games by **~40%**.
- **User Interface:** Designed an intuitive "mobile-first" dashboard using Tailwind CSS to aggregate complex game data for active monthly users.
- **Tech Stack:** React 19, Java (Spring WebFlux), Tailwind CSS, PostgreSQL, Vite.

WORK EXPERIENCE

TridHome

Backend Developer

Apr 2025 – Present

Remote

- Engineered a custom AI model integration using **Python (Django)** to handle 24/7 user inquiries, reducing average customer support response time by **~40%**.
- Developed **10+ robust API endpoints** for client applications, ensuring **100% adherence** to security best practices and protecting sensitive user data.
- Architected scalable microservices to optimize application performance, resulting in a **20% reduction** in server

latency during peak traffic periods.

- **Tech Stack:** Python (Django), OpenAI API, SQL, PyCharm.

SKILLS

- **Languages:** Java (21), JavaScript (ES6+), Python, HTML5, CSS3, SQL.
- **Frameworks:** Spring Boot, Spring WebFlux, React (v19), Django, Flask, Hibernate/JPA, Tailwind CSS.
- **Tools & Platforms:** Git, Docker, Maven, PostgreSQL, Redis/Caffeine, Postman, Vite, Vercel.
- **Modern Development: Proficient in AI-augmented engineering** (leveraging **GitHub Copilot, Claude, and Cursor** for rapid prototyping, complex debugging, and codebase refactoring).
- **Core Competencies:** Microservices Architecture, RESTful APIs, JWT Security, Database Optimization, Asynchronous Programming, and Performance Tuning.
